Drug Facts

COMPOSITION : Lysine Clonixinate 125mg and ERGOTAMINE Tartrate 1mg.	PHARMACOLOGICAL CLASS : nonsteroidal anti-inflammatory drug, ergot alkaloid
---	---

NAME : Lysine Clonixinate 125 mg +Ergotamine Tartrate 1 mg Coated Tablet

AVAILABLE AS : Generic name

PHARMACOLOGICAL ACTION : Lysine Clonixinate does not appear to have been investigated on a molecular level. It is presumed to function similarly to other NSAIDs by inhibiting cyclooxygenase enzymes 1 and 2 resulting in a reduction in prostaglandin production.

ergotamine tartrate/dihydroergotamine. Clinical Pharmacology: Mechanism of Action: An ergotamine derivative and alpha-adrenergic blocker that directly stimulates vascular smooth muscle, resulting in peripheral and cerebral vasoconstriction. May also have antagonist effects on serotonin.

USED FOR : Used for the treatment of acute migraine, Ergotamine is an ergot alkaloid that works by reducing the flow of blood to the brain, therefore, relieving, and preventing vascular headaches, and their painful effects. Each tablet comes with Lysine Clonixinate 125mg and ERGOTAMINE Tartrate 1mg.

SIDE EFFECTS : Ergotamine

Call your doctor at once if you have:

numbness, tingling, or a pale appearance in your fingers or toes;
